

AMARJITH V

FULL STACK WEBDEVELOPER

I strive to be well-versed in comprehensive technical solutions to become an full stack developer. who is passionate about coding,solving problems and learning new things and always try to adopt new techniques of achieving goals.

SKILLS

- Vue.js
- Nuxt.js
- Node.js (Express.js)
- PHP (Laravel/Lumen)
- MySQL
- PostgreSQL
- Docker
- GIT
- GraphQL
- Cloud (Azure basics)

EDUCATION

CALICUT UNIVERSITY

Bachelor of Technology In Information Technology
University of calicut | 2017 - 2021

EXPERIENCE

JUNIOR SOFTWARE PROGRAMMER

Bridge Global | Kochi | Kerala | 2021-Present

- Effectively Communicating with clients and internal team to understand the business objectives.
- Knowledge in headless CMS like Strapi, Netlify CMS and CMS like Wordpress.
- Experienced in designing responsive web pages using HTML5, CSS, javascript and Bootstrap Library.
- Experienced in designing and implementing Atomic design .
- Experienced in work with Dockerized projects.
- Experienced in Linux Environment.
- Basic experience in CI/CD, Pipeline

PROJECTS

CLEFFEX WEBSITE

- web development project that started off as a dynamic website built using Nuxt.js and Strapi
- Nuxt.js is a popular JavaScript framework for creating server-rendered applications, while Strapi is a flexible and open-source headless CMS (Content Management System).

The dynamic functionality of Cleffex.com was achieved through the integration of Strapi. Strapi provided a user-friendly interface for managing the website's content and allowed for easy customization and scalability

Overall, the project journey of Cleffex.com showcases the flexibility and adaptability of web development, as it evolved from a dynamic **Nuxt.js and Strapi** website to a static **WordPress** site, benefiting from the unique strengths of each technology stack.

ROLES & RESPONSIBILITIES

- Develop user interfaces and implement designs using Nuxt.js.
- Write clean, maintainable, and efficient code.
- Integrate APIs and external services.
- Manage and organize the website's content using the Strapi CMS.
- Create and update content pages, blog posts, and media assets

SETELLITE - PLANET X TECHNOLOGIES

The project involves the development of a platform consisting of an iPad app and a web client, designed to facilitate real-time collaboration among users working on the same project. The platform's main focus is on providing a comprehensive and organized solution for collecting and registering on-set VFX (Visual Effects) data.

The web app, known as Setellite, serves as the central hub for managing and organizing all the on-set VFX data in an efficient and structured manner. It offers a user-friendly interface that enables users to input and store various types of data related to VFX. This includes shot details, scene information, camera settings, VFX annotations, and other relevant data points. The goal is to streamline the process of collecting and managing VFX data, ensuring that all information is easily accessible and well-organized.

Vue 3, a popular JavaScript framework, is the primary technology used for developing the web client of Setellite. Vue 3 provides a powerful and flexible foundation for creating dynamic and responsive user interfaces

CARTERON - HC INNOVATIONS

The real estate portal is a comprehensive online platform that allows users to refine their property search and browse through various listings. It offers a user-friendly interface and advanced search capabilities, enabling users to find their desired properties efficiently.

The front-end of the portal is developed using **Nuxt.js**, which is a powerful JavaScript framework for building server-rendered applications

Overall, the real estate portal is a feature-rich platform that empowers users to refine their property search, explore listings through map-based searching, and conduct secure transactions through Stripe

ROLES & RESPONSIBILITIES

- Develop user interfaces and implement designs using Nuxt.js.
- Implement responsive design for optimal user experience across devices.
- Integrate APIs and services for property listings, search, and map functionality.

EKIPA WORDPRESS- ON GOING

- Ekipa is an Agile guide with three separate domains in Singapore, Malaysia, and Indonesia.
- The project was initially developed using WordPress as the platform.
- Ekipa is now focused on merging these three domains into a single, multilingual website called ekipa.co.

ROLES & RESPONSIBILITIES

- Developed and implemented a WordPress website from scratch, ensuring seamless functionality and user-friendly navigation.
- Created and optimized web pages, including layout design, content formatting, and responsive elements.
- Developed and implemented custom post types, shortcodes, and taxonomies for efficient content organization and presentation.
- Maintained website translation using the WPML (WordPress Multilingual) plugin, ensuring accurate and consistent localization across multiple languages.
